KEYWORDS: coal ash, concrete, agriculture, alternative fuel, commercial use

ABSTRACT

The paper will describe ways in which industries in Maryland either use coal ash in their product or service as well as research that is underway by industry to explore new uses for coal ash. As the economic environment changes, we have seen increasing interest in the potential for coal ash to be incorporated into manufacturing processes that previously utilized other materials. The information on Maryland industry will address uses by the construction, agricultural, alternative fuel and concrete industries. Partnerships between industry and local, state and federal governments to explore commercial uses of coal ash will also be described.
